**ABSTRACT** 

A novel frame-matching method and apparatus in a communication system is The frame matching method and apparatus of the present invention disclosed. matches or aligns flexible length data (e.g., symbols) to standard-sized frames without the need for non-standard puncturing. The method and apparatus of the present invention determines how many times to disable symbol puncturing based upon parameters associated with a given data set. The present invention is capable of disabling symbol puncturing for any given data bit, group of data or symbol.
